Securin

Vulnerability Management
Continuous Threat Analysis to Manage Evolving Risks

Today, organizations spend time remediating vulnerabilities that have minimal risks while the most dangerous weaknesses fly past their radar. Securin's mature Vulnerability Management continuously scans the environment for dangerous vulnerabilities and prioritizes them based on criticality, exploits, probability of weaponization, and impact.

Challenges in Vulnerability Management

Organizations need to sift through a massive volume of data to understand where their risks lie.

The lack of skilled resources is hurting organizations as they struggle to recruit professionals to improve their security posture.

Prioritizing vulnerabilities for remediation is a challenge for security teams.

Latency in remediating vulnerabilities gives organizations a large window of exposure, making them vulnerable to cyberattacks.

Huge gaps in MITRE resources (the NVD, ATT&CK, and CAPEC) make it difficult for security teams to prioritize vulnerabilities.

Why Customers Trust Us

We became a CVE Numbering Authority to help the U.S. Department of Homeland Security and MITRE validate newly discovered vulnerabilities and expedite their entry into the National Vulnerability Database.

Securin

Failure to adopt a continuous approach to vulnerability management will lead to sustained security debt.

Organizations are often not able to quantify their vulnerability management program to check if their remediation process is moving in the right direction.

Securin's mature vulnerability management combines automation and human intelligence, providing you with complete visibility of all vulnerabilities mapped to known threats and risks.
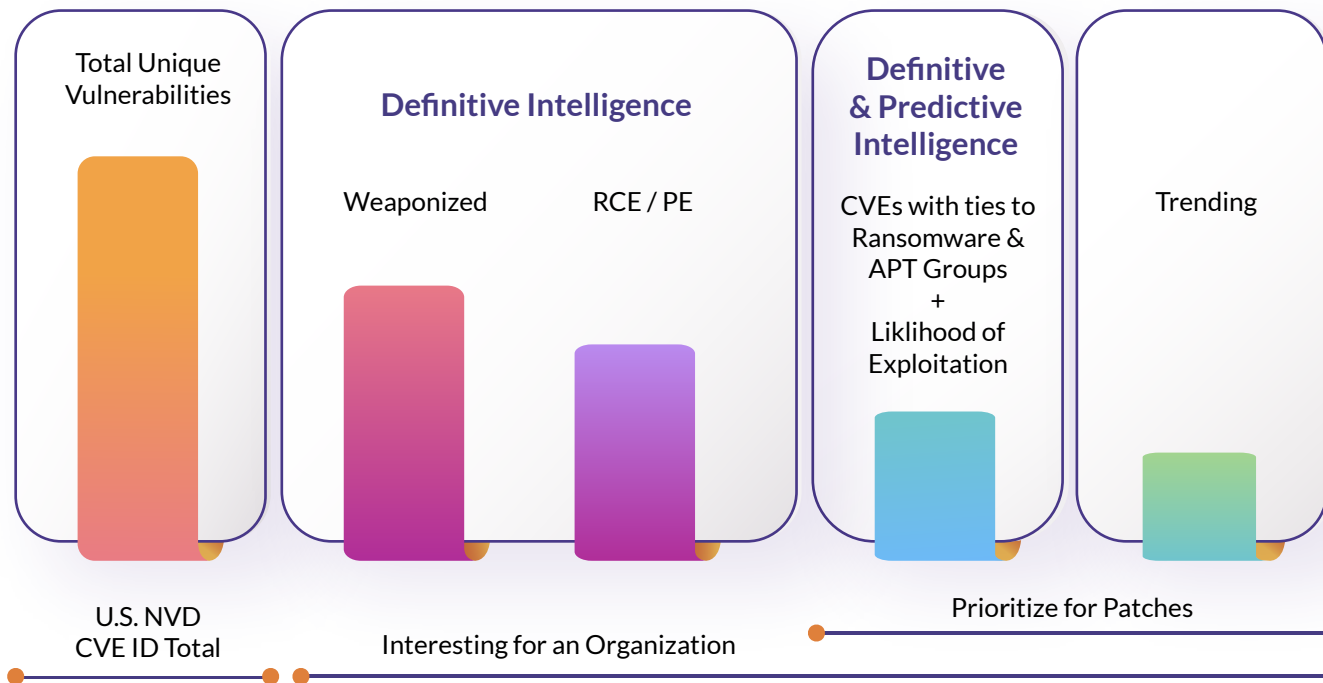

Here's How We Do It!

We analyze and investigate the scan results to map your vulnerabilities to known threats and risks.

We provide a custom report about your security posture and vulnerabilities.

We use your existing scanners (or ours) to assimilate data along with our proprietary scripts.

We prioritize vulnerabilities based on weaponization, impact, the criticality of the asset, and the likelihood of exploitation.

Chart a remediation plan and provide guided support to your security teams.

Prioritize for Patches

Key Benefits

> Improve turnaround time to remediate high-impact vulnerabilities and reduce your window of exposure to attacks.

> Save on Full Time Employee (FTE) and leverage Securin's dedicated SME expertise to manage your vulnerabilities and improve your security posture.

> Customized reporting and metrics provide actionable intelligence and accurate threat context for each vulnerability

> Ad hoc scanning and rapid response to emerging and evolving threats with timely alerts and notifications tailored for your environment and tech stack.

Securin

Quantify your Risk

Is your vulnerability management program moving in the right direction?

Securin experts help quantify your security posture by continuously measuring your risk and exposures and analyzing your risk quotient against emerging threats.

	Post Remediation: Company A	Before Remediation	Post Remediation: Company B
Total Vulnerabilities	6000	10000	6000
Weaponized	150	2650	2000
RCE/PE	90	1190	1100
